Re: 2019 Regional Aerial Project

Scott County is not static. Human activities and natural forces continuously reshape our environment. As a tool to help manage this change, local governments across Iowa employ the use of aerial imagery, typically updating it in 2-5 year cycles. Scott County last flew aerials in April of 2014. It has been used to support the functions of several departments and is a key resource for constituents and local businesses.

In cooperation with the Bi-State Regional Commission, Scott County participated in a consortium of local governments to acquire new spring 2019 orthophotography and related photogrammetric products. Participation in the larger consortium provides savings due to economies of scale, shared costs for RFP development, and joint funding opportunities. See Table 1 for a list of 2019 project participants and cost sharing amounts for Scott County, local cities and Assessors' offices.

DCI, Inc. provided RFP development and procurement services for the consortium and two firms responded to the RFP. After a thorough selection process including a technical ranking of RFP responses and on-site interviews, the consortium recommended the Surdex Corporation. Surdex scored higher in our technical rankings and delivered a competitive bid which was approximately 20% less than the alternative.

The photogrammetric products/services identified in the Surdex contract includes:

- 3 inch (0.25 ft.) resolution natural color orthophotography.
- Ground control surveys.
- Aerial target paneling.
- QA/QC testing according to National Standard for Spatial Data Accuracy (NSSDA) guidelines.

For more information please refer to the attached Contract Agreement. I respectfully recommend approval of the Contract Agreement with the Surdex Corporation in the amount of \$62,100 to acquire updated aerial imagery and related services.

Sincerely,

PROPOSAL FOR
Bi-State Aerial Mapping Project
Spring 2019

This proposal incorporates the Bi-State Regional Commission specification and requirements of the November 20, 2018 Request for Proposal (RFP), Bi-State Region Aerial Mapping Project Spring 2019 and the Surdex Proposal submitted on January 7, 2019 for the referenced RFP.

PROJECT AREA

This project is a regional project for the Bi-State Aerial Mapping Partners including Scott County, Iowa. The project area includes 3 Counties worth of imagery which includes 406.04 square miles of Scott County. The project area of interest (AOI) is shown in the preliminary flight diagram later in this document. Prior to mobilization of acquisition assets and production, Surdex will require confirmation of the contractual project limits.

DIGITAL AERIAL PHOTOGRAPHY

Surdex aircraft will capture aerial photography of your area of interest. Each aircraft is equipped with high-precision digital aerial mapping sensors. The acquisition plan will be designed to achieve photogrammetric accuracies based on the known requirements requested by the County and generally accepted industry practice. Surdex will use the ADS100 image sensor equipped with forward motion compensation and gyro-mount sensor leveling features. To supplement the required photogrammetric ground control, all aircraft and sensors are equipped with Global Positioning System (GPS) Navigation, Airborne Global Positioning System (ABGPS) survey and Inertial Measurement Unit (IMU) technology. Surdex's ADS100 direct digital sensors capture Panchromatic (PAN), Red, Green, Blue (RGB) and near Infrared (IR) bands simultaneously. Processing and delivery of supplemental image bands is available upon request for an additional charge.

Acquisition Conditions: Surdex will take vertical aerial photographs using a precision aerial mapping camera, free of clouds, cloud shadows and atmospheric haze, generally between 10:00 a.m. and 2:00 p.m., or when the sun angle is greater than 30 degrees.

Flight Photo Index: A flight photo index shall be delivered in a geo-referenced AutoCAD version 2014 DWG file format and Esri shapefile (including .prj file) file format. Photo center point locations (derived from the airborne GPS/IMU survey) and image foot prints or edge of image swath shall be included.

PRELIMINARY FLIGHT DIAGRAM

This flight diagram's below show the flight plan for the whole area of interest for the 2019 spring aerial mapping project.

GROUND CONTROL SURVEYS

Surdex will perform ground surveys to support geospatial data production projects. This surveying will be performed to an accuracy and density required to support the mapping project. The American Society of Photogrammetry and Remote Sensing (ASPRS) Positional Accuracy Standards for Digital Geospatial Data defines the accuracy of ground survey points used in the generation of geospatial data products.

AEROTRIANGULATION: Analytical aerotriangulation may be used to establish supplemental horizontal and vertical control for stereoscopic models.

ORTHOPHOTO MAPPING

Surdex will produce digital orthorectified aerial image tiles consistent with the shapefile area of interest (AOI) and tile layout desired partner of the Bi-State Consortium. The orthoimage tiles will be provided at a horizontal scale of 1"=50' at a ground resolution of .25'. Unless specifically requested in writing, Surdex reserves the right to utilize, if available, any existing elevation model deemed suitable for orthorectification to meet the contractual accuracy requirements as stated. If suitable elevation data is not available, Surdex will generate a new elevation model using manual and automated photogrammetric techniques. Surdex will deliver the surface model used in the orthorectification process delivered in Esri 3D shape file and ASCII formats. If requested, Surdex will deliver the elevation model used in the orthorectification process. To improve efficiency of client acceptance, Surdex may provide, at its discretion, seamline data for reference. Standard image format shall be tiff and tiff world (.tif/.tfw) and will be delivered on external hard drive. Additional image formats are available. An additional charge may be required for additional formatting or processing.

MAPPING ACCURACY

Unless otherwise requested, the photogrammetric mapping provided under this proposal will meet or exceed American Society for Photogrammetry and Remote Sensing (ASPRS) Accuracy Standards for Digital Geospatial Data, horizontal and/or vertical accuracies as listed below. Table accuracy values below are RMSE in centimeters.

Accuracies by GSD for ASPRS Standard Mapping and GIS Work				
GSD	Limiting RMSE _{x,y}	RMSE _r	CE95	Allowable Seamline Mismatch
0.25'/3"/7.6cm	0.5'/15.2cm	0.71'/21.6cm	1.22'/37.3cm	1.0'/30.5cm

MAP TESTING PROCEDURES

Standard procedure requires that photogrammetric maps be field-checked prior to use. Obtaining field survey information for map check purposes will be the sole responsibility of the County. Failure to perform field tests and notify Surdex of non-compliance with the map accuracy standards previously stated within nine (9) months of delivery shall be deemed an acceptance of the maps and any claims whatsoever as a result of such non-compliance are waived.

Surdex recommends map testing follow FGDC-STD-007.3-1998, Geospatial Positioning Accuracy Standards, Part 3: National Standard for Spatial Data Accuracy (NSSDA) guidelines.
